# Böëna Wilderness Lodges - Purpose

*The PURPOSE of BÖËNA is to create extraordinary experiences that inspire us to transcend and contribute to protecting the natural wonders in perpetuity.*

# Our Three Pillars

## UNIQUE NATURE

We feel nature as a sacred space, the original world, the place where we all come from, but that we have forgotten.

In Böëna

We believe in the regenerative power of nature. Because returning to the forest is like returning to the womb.

That is why we have an unbreakable, permanent and deep commitment to the perpetual protection of forest areas.

So that human beings of the present and future can enjoy them forever.

## AUTHENTIC PEOPLE

We think that people who love forests and who are heirs of their own culture are capable of transmitting that wealth to visitors from all over the world.

In Böëna

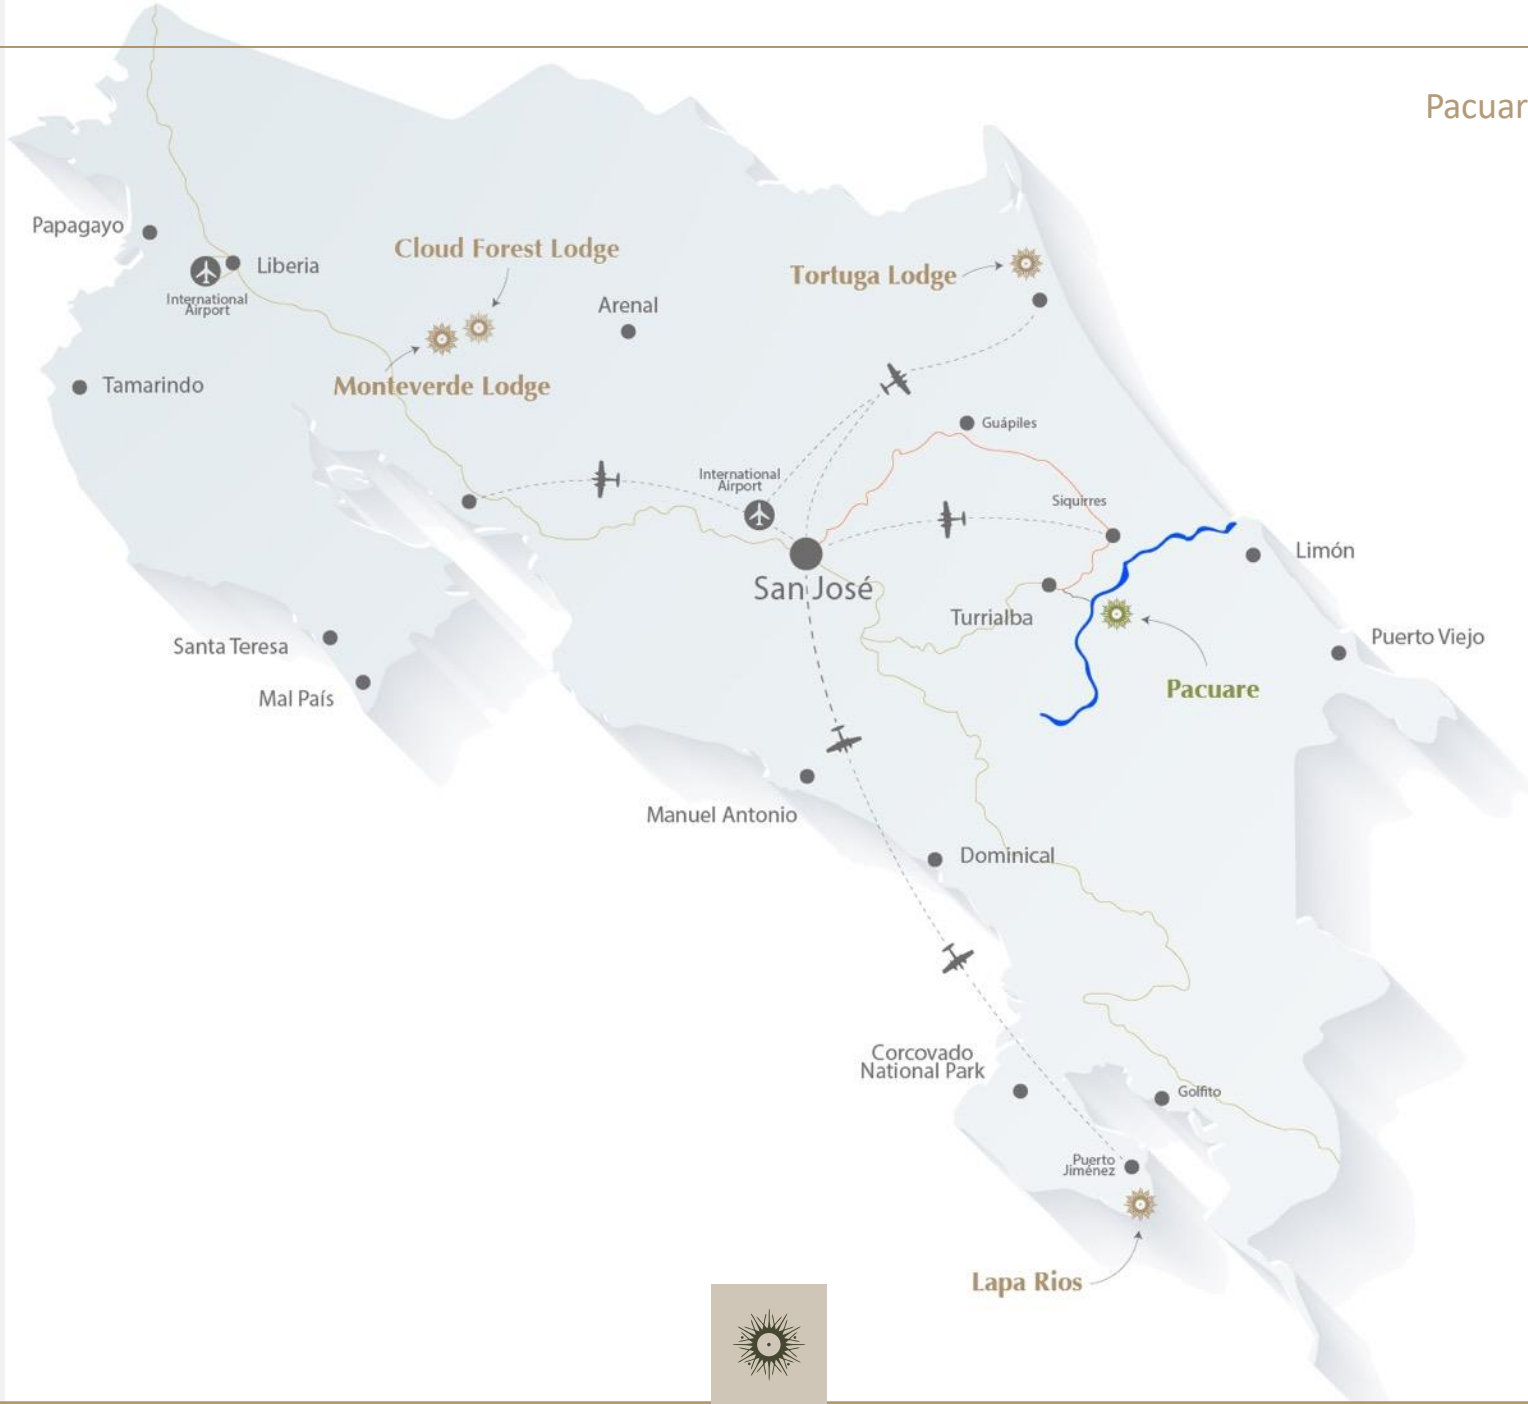

We believe in the value of human authenticity. Because only through true contact with local people can we learn from their way of life and their vision of the world, and take home something more than photographs: memories attached to the heart.

## TRASCENDENT EXPERIENCES

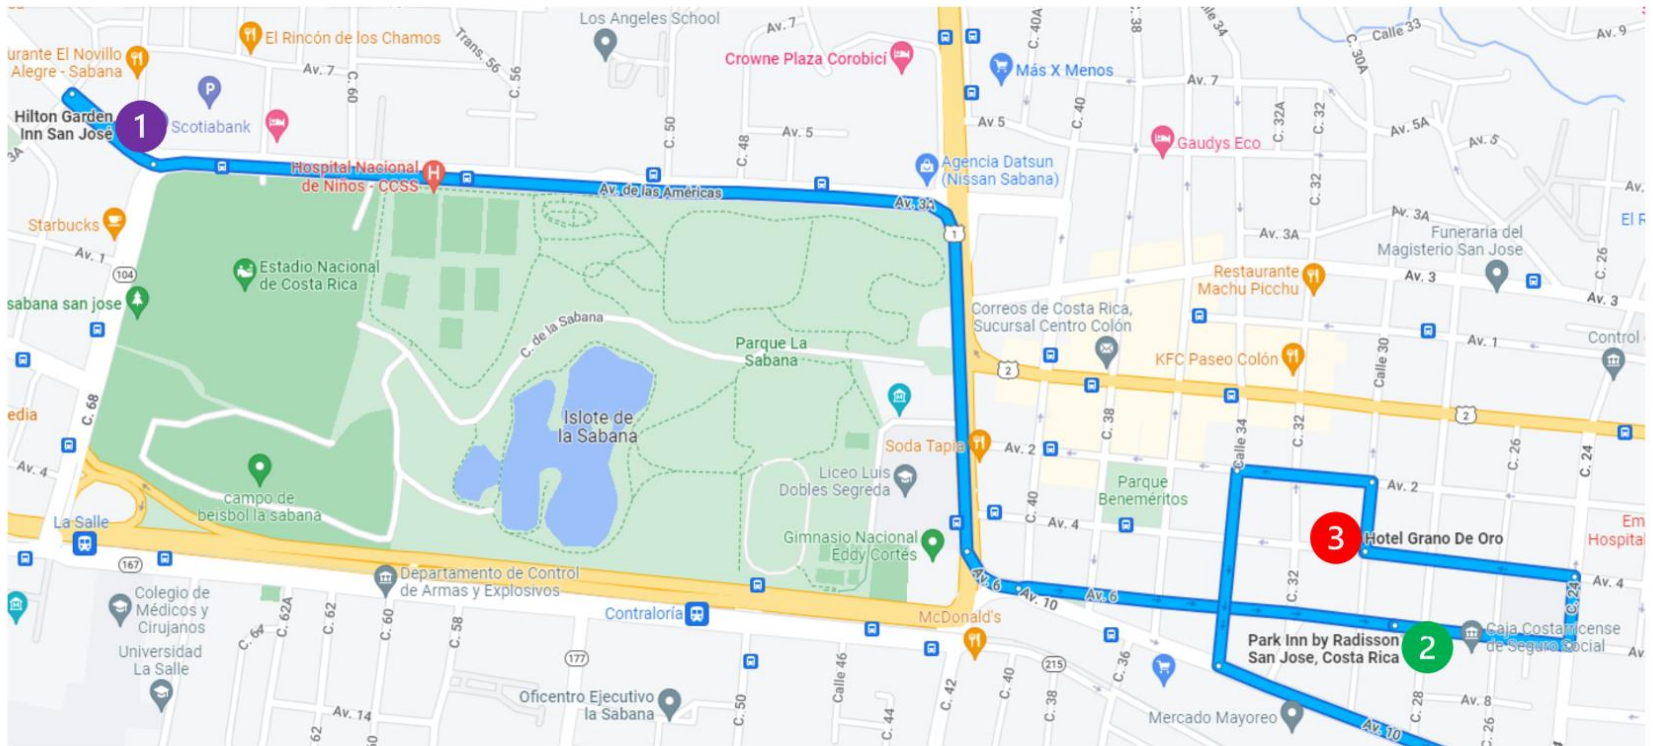

We know that no human being is happy unless he finds his purpose. That is why at Böëna we look for a way to turn each experience into an opportunity to connect with wonder, a way to discover our inner truth.

We believe that every menu, every therapy, every tour or walk should be full of meaning, infused with cultural richness and incomparable natural beauty. Because the senses are the doors to the soul.

# Pacuare River Rafting

A group of people in blue inflatable rafts are navigating a river with white-water rapids. The river is surrounded by dense green forest and rocky banks. The water is a vibrant turquoise color. The raft in the foreground is filled with several people wearing helmets and life jackets, paddling through the rapids. Another raft is visible further upstream.

Rafting

A person wearing a blue shirt, khaki shorts, a white helmet, and a harness is rappelling down a rope. They are positioned on a mossy rock ledge in a lush, green forest. The scene is filled with various tropical plants and ferns. The person is holding onto the rope and a metal carabiner, appearing to be in the middle of a descent.

Canyoning

A person is standing on a metal walkway platform built high up in a large tree trunk. The walkway is surrounded by dense green foliage and other trees. The person is wearing a blue shirt and a white helmet. The scene is set in a lush, green forest with sunlight filtering through the leaves.

# Sustainability efforts

Following the 4C's Philosophy by the Long Run Foundation we are preserving nearly 2,000 acres of forest as private nature reserves.

We generate our own clean electricity with nearly 450 solar panels, and 12 hydro electrical turbines (10 of them nano size).

Nearly 300 people from local communities in the locations where we operate.

We promote local sourcing and commerce development as much as possible.

## **Sustainability efforts Pacuare Lodge**

**The photovoltaic project carried out at Pacuare Lodge reflects a firm commitment to environmental sustainability and the constant pursuit of continuous improvement in terms of energy efficiency.**

- 64 high-efficiency solar panels have been installed
- 24 lithium batteries of 5 kWh each have been installed, totaling a storage capacity of 120 kWh

**With the installation of high-performance solar panels and lithium batteries, there has been a 30% increase in photovoltaic generation capacity and a 25% increase in storage capacity compared to the previous system**
